Faculty Checklist for Accessible Content

Digital accessibility benefits everyone - even people without disabilities. On top of that, many students with disabilities may choose not to disclose their disability status. By proactively improving the accessibility of your digital course materials, you can help improve the learning experience and support success for all students. While not comprehensive, building these practices into your course preparation will make your digital materials easier to use for all students.

For more information and deeper learning on this topic, the Educause website provides some useful accessibility resources.

Include an accessibility statement in your syllabus

Add alt text to images

Use readable text and colors

Write clear, descriptive links

Run the accessibility checker

Provide accessible PDFs or seek alternatives

Caption your videos

Provide Audio Transcripts

Organize materials clearly

Write in clear language

Use simple tables

Avoid blinking or flashing content

Does your syllabus include details on all activities to be completed during the course?
